Late Cretaceous weakly to strongly silica-undersaturated alkaline dike series of the Mantiqueira Range, Serra do Mar alkaline province: crustal assimilation processes and mantle source signatures

Rogério Guitarrari Azzone^{*}, Excelso Ruberti, Júlio César Lopes da Silva, Celso de Barros Gomes, Gaston Eduardo Enrich Rojas, Maria Helena Bezerra Maia de Hollanda, Colombo Celso Gaeta Tassinari
Supplementary Material

Table A5. Representative whole-rock analyses for the phonolites of the strongly silica-undersaturated series of alkaline dikes from the Mantiqueira mountain region

(1) Total Iron as ferric Iron

(2) LOI - Loss of ignition

(3) Mg# - $MgO/(MgO+FeOT)$, molar proportions

(4) Normative values followed calculation scheme Kelsey (1965). The FeO/Fe_2O_3 ratios used for this calculation followed Le Maitre (1976).
